Special Rx Offer

1. Prescribing provisionals is easy. Just send us preoperative and opposing impressions or stone models, bite registration, and a detailed prescription that identifies abutment teeth and pontic sites. Carefully package your case in bubble wrap, including this Rx, and tape box securely closed.
2. To schedule shipping pickup, call us at **800-854-7256**.
3. See back of Rx for in-lab working times.
4. With this Rx, you'll save \$10* per unit (up to 10 units) on provisionals.

Offer expires Dec. 31, 2021

*Price does not include shipping or applicable taxes. To save money on shipping, include multiple cases in one box. Limit one special offer per case. Offer applicable for a maximum of two specially priced Rxs per account for specified products only. Special pricing not valid with any other offer.

ANTERIOR

- A. 1 mm incisal reduction
- B. 0.8 mm middle third reduction
- C. Labial and lingual walls must be convergent
- D. Preparation should be cut in three planes

- A. 0.3 to 1.0 mm labial reduction

POSTERIOR

- A. 1 mm occlusal reduction
- B. 0.8 mm middle third reduction
- C. Buccal and lingual walls must be convergent
- D. Preparation should be cut in three planes

LABIAL OR 360° MARGIN

- 0.3-0.5 mm gingival reduction using rounded shoulder margin design

IN-LAB WORKING TIMES

Please allow full working time for each product selected. Working times are **NOT** guaranteed and do **NOT** include weekends or holidays.

BioTemps Provisionals	5 working days
w/ cast-metal frame or	
cast-metal reinforcement over implant	6 working days
w/ cast-metal substructure	6 working days
screw-retained over implant.....	6 working days
Transition Crowns & Bridges	6 working days
over implant.....	6 working days

Rush service available. Call for details.

PROVISIONALS RELINE INSTRUCTIONS

For best results, reline provisionals with a methyl methacrylate acrylic reline material (i.e., Luxatemp® Ultra by DMG America, Jet® by Lang, Coldpac by Yates Motloid or Palavit® 55 by Heraeus Kulzer). Other reline materials should be avoided. However, if used, mechanical undercuts must be cut into the abutment shells for better retention of the reline material.

- Try in the restorations. If any adjustment is needed to seat the restoration, use a low-speed carbide or composite finishing bur.
- Rinse with water and dry completely.

- Apply a thin layer of petroleum jelly to the outer surface of the restoration to prevent excess reline material from sticking.
- Reline provisionals by blocking out any undercuts on the preparations.

- Apply a minimal amount of reline material to the intaglio of the provisional. Use the mix tip to coat the inner walls with the material and evacuate any trapped air bubbles or voids.
- Do not allow the reline material to fully cure on the preparations due to heat generation, which may cause injury to the pulp.
- Gently work the provisional on and off the preps, allowing them to bench cure.

- Trim away any flash or excess acrylic using a plastic grinding disc.
- Provisionals can be polished with pumice and polishing paste or resealed with a light-cured glaze (e.g., Palaseal®, Heraeus Kulzer).
- Cement provisionals using a non-eugenol temporary cement if higher retention is needed, Neo-Temp™ by Waterpik can be used.

Dr. Steven Barrett shares how lab-made provisionals are an important factor in increasing patient acceptance

STEP-BY-STEP GUIDE FOR TAKING ACCURATE IMPRESSIONS FOR SMILE TRANSITIONS

Hand mix soft putty using (Capture Soft Putty Kit [Glidewell Direct]). Roll and mold the material into a metal, plastic or custom impression tray.

Place a thin, flexible square sheet of plastic over the impression tray.

Place the entire tray with putty and plastic in the patient's mouth and instruct the patient to bite down for five seconds on cotton rolls that are placed bi-laterally.

Remove the tray from the patient's mouth after five seconds. Take off the plastic sheet and immediately fill the voided area with syringable medium body VPS (Capture Kit - Medium Crown [Glidewell Direct]). Reinsert the tray, holding the impression by hand until set. Do NOT allow the patient to bite down at this stage. Repeat all steps for the opposing arch.

Perform full-arch bite registration with syringable hard body bite registration (Capture Clinic Cartridge Pack - Hard Bite Registration [Glidewell Direct]). Patient will bite in centric occlusion.
